

Title to be posted on advert: Data Engineer – Outside IR35
Contract length: 6 month contract
Pay rate: £484/day (Outside IR35)
Location: Remote

Advert Text:

Venesky-Brown's client, a public sector organisation in Edinburgh, is currently looking to recruit a Data Engineer for an initial 6 month contract with potential to extend on a rate of £484/day (Outside IR35). This role will be remote working with the potential for some team activities taking place at the offices in Edinburgh.

Responsibilities:

- Ensure technical resiliency of all data integration solutions and services
- Support the delivery of ongoing data engineering activities
- Enhance and support existing data product outputs for both internal and external customers.
- Collaborate with technical colleagues across the organisation to design robust data integration solutions
- Demonstrate excellent, sustainable and collaborative software development practice that's focused on delivering highly readable, maintainable and appropriate artefacts.
- Actively participate in all team events, leading where specialist knowledge is required and supporting the team to improve their process through inspection and adaptation.
- Troubleshooting and fixing development and production problems across multiple environments and operating platforms.
- Engage with the wider communities of practice and interest to share knowledge, technique and experience
- Ensures high quality of developed solutions through development and maintenance of unit tests - with appropriate code coverage - and code analysis using code quality tools, Requirement for Data Engineering services.
- Ensure that developed software complies with non-functional software requirements such as accessibility, security, UI/UX, performance, maintainability and deployability.
- Routinely use collaborative development practices such as pairing and mobbing techniques in programming, code reviews, system design and requirements analysis, etc.
- Support and deliver the disaster recover assurance of digital services, striving towards a sustainable Recovery Time Objective of 2hrs and Recovery Point objective of zero. This will be assured at 6 weekend points over the course of a FY year.

Essential Skills:

- Python
- PostgreSQL
- REST APIs
- Modern DevOps and CI/CD practices and tooling including Docker, GitLab CI, AWS CodePipeline, AWS CDK and AWS CloudFormation
- Expertise in SQL, data transformation and analysis
- Delivering high quality software collaboratively in high-performing, cross-functional development teams.
- Experience implementing data ETLs, data streaming systems and data integration solutions
- Experience working in the Agile delivery models - such as Scrum and/or Kanban frameworks.

Desirable Skills:

- Data warehousing
- Hybrid on-premises/cloud solutions
- AWS Glue, Lambda functions, S3, RDS, Comprehend, SageMaker, Data Migration Service
- Experience implementing ML/AI-based solutions, especially in the NLP domain
- Spark
- Using testing tools for unit testing, including system test automation frameworks
- Openshift

- PostGIS for PostgreSQL
- Designing and implementing solutions using service and event-based architectures
- Monitoring, alerting, intelligence tools and processes, including Grafana
- Human-centred, research-driven, inclusive design practices
- TDD
